ENDNOTES

1. Side note: In case you're team James Cameron here and you're about to say that the doorframe wasn't buoyant enough for the two of them, I'm proud/ashamed to admit how much time I spent researching this very argument. It turns out that Jamie Hyneman and Adam Savage of *MythBusters* tested out this famous scene that has now grown quite contested. What they found is that if Rose had placed her life jacket under the doorframe, it would in fact have been buoyant enough to support both her and Jack. But honestly, who would think to do that when they're suffering from hypothermia and in the wake of a traumatic experience?

99. To be clear, these stereotypes are grossly overexaggerated. Someone with serious mental illness is more likely to be a victim of a crime than a perpetrator. The key predictors of violence are being young, being male-identified, and having lower socioeconomic status. In fact, you're more likely to be stabbed by someone robbing your house than by someone experiencing psychosis.

177. At the same time, if you feel like you are always crying (often uncontrollably) and this symptom feels distressing for you, talk to a provider about it. This tearfulness can often be a biological indicator of distress and/or depression, and a biological intervention can be helpful in this case. While medication is not for everyone, I've seen several clients respond well to an antidepressant when prescribed for their tearfulness by a psychiatrist.
